

OPS Bulletin

Unattended Items in Bradley West Elevators

April 16, 2019

The elevators in the TBIT Gates are equipped with certain safety features since they travel between Secure and Non-Secure Areas (gates to ramp).

More specifically, the elevators are equipped with weight sensors and cameras with motion sensing features that are designed to detect a person within the elevator. If the occupancy sensor or weight threshold is not met, the elevator unit may fault and become out of service until a repair is performed.

To avoid placing the elevators out of service we would like to remind all who utilize the gate elevators not to leave items unattended. All bags, strollers, car seats, wheelchairs, etc., must be transported to the ramp accompanied by an employee.
