

OPS Bulletin

Bag Room Trash

March 26, 2019

Trash

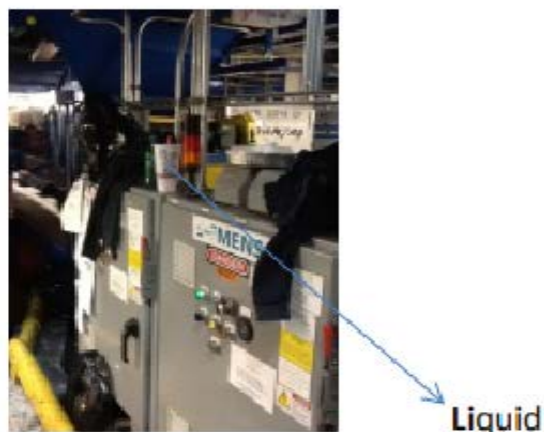

Many of the BHS components located in the TBIT Bag Room can cause enough friction to start a fire and such incidents have occurred in bag systems around the country. For this reason, we ask for all employees working in the Bag Room to utilize the trash cans located on each sort pier.

Liquids

Most equipment located in the Bag Room contains 480 volts of electricity. Beverages and other liquids that make contact with these components can cause injury or even death. **Never** place drinks on Bag Room BHS equipment.

Personal Items

Back packs and other personal items hung on the BHS equipment may get caught in the motors and other moving components of the BHS and cause injury and equipment damage. Instead, use the hooks provided on each sort pier for personal item storage.

As per the LAWA Rules and Regulations, violating the policies in this alert can result in the following disciplinary actions:

- Defacing, tampering or vandalizing Airport property, security systems, devices, or Airport issued ID badge – 4 points or badge confiscation
