## **Ticket Counter BHS Operations**

*March 26, 2019*

### **Emergency Stops**

Do not hit the Emergency Stop (E-Stop) unless it is an emergency. E-Stops are not to be used for operational purposes or to keep conveyor belts from timing out. When a ticket counter belt stops due to cascading, depressing buttons on the control panel will not restart the belt any faster, regardless of what combination is used. When activated, E-Stops also stop other conveyor belts within the BHS and may further delay the ticket counter from starting.

### **Empty Tubs**

Inducting empty baggage tubs into the BHS will contribute to the following:

- Additional jams
- Less space in the system for real bags
- Congestion at the Manual Encode Station
- Higher volume of bags at the default piers
- Circulation of baggage in the BHS
- Longer bag transit times

For any questions or concerns, contact the **TBITEC Manager on Duty** at **310-646-9378**
